

# Personal Portfolio II

Ahmed Elshobokshi – N8655189

---

## Item 1: Design & Mock-ups

More features were needed to be added to the website. With collaboration with the rest of the team, the designs for sort & filter and the login page had been discussed. There is a folder included called mockups.

## Item 2: Sort & Filter

After designing the interface and the buttons, html and css were written in order to match the layout and the looks of the website. Another group member has implemented the javascript behind the sorting and filtering. The file is properties.html

## Item 3: Login page and Admin Navbar

In order to match the login area and make the navigation bar consistent across the website. Custom css was written on top of Django. These files are, login.html and admin\_base.html.

## Item 4: Home page redesign

Following some critiques of the design not being good enough, the home page has been redesigned an introductory video has been added and an image for mobile devices. Check website <https://dry-plains-2958.herokuapp.com/> and the file index.html

## Item 5: Bug fixing

Every time a new change has been implemented, I check all previous features and fix any bugs. I make sure the website works consistently on all browsers and devices as much as possible. My part of finding bugs, include reviewing HTML, CSS and Javascript.
