

Personal Portfolio 2

Sprint 3 and 4 User Task Plans (Sprint 3 and sprint 4 plans.pdf)

For sprint 3 and sprint 4, I was responsible for setting up user tasks for each user story in sprint 4. I have kept our release plans up to date in Jira as well as the hard copy of our release plans.

logged_out.html template

This is one of the templates that I pulled out from the Django files so that we could customise the logout page message and style using css. To customise default Django templates, templates need to be copied over from the Django system files and added to the correct folders in the project folder.

admin_base.css

This is a CSS styling file used to style admin related pages such as login.html, logout.html, etc. The custom CSS is included at the bottom of the file.

Managing Jira (jira sprint 3.jpg)

I was responsible for managing Jira. A screenshot of one of the sprints that I managed through Jira is provided. I was responsible for managing the user stories, sprints and user story tasks. Refer to Jira for the complete Jira entries.

models.py

The database file for our database fields. I added some admin fields for the database relating to user accounts, tenant property information, tenant managers, etc. Jordan also contributed to this file so he has included it in the submission as well. We each contributed different pieces of code to this file.
