Personal Portfolio

Brennan Fairfull – Group 25

The five items I have selected are mainly focus on testing the project as I was the unofficial tester for the release two sprints as I had learnt selenium and Django testing quite well in the first release.

The first item in my personal portfolio is Release1_sprint1_tests.py containing selenium tests that test the implementations that we added for user accounts and access control (sprint 1).

The second item is manualtestingsprint1.xlsx a manual testing document I used to aid to test certain situations I couldn't test with the selenium or proved impractical to test with selenium for sprint 1.

The third item is Release1_sprint2_tests.py containing selenium tests that test the implementations that we added for adding and editing properties (sprint 2).

The forth item is manualtestingsprint2.xlsx a manual testing document I used to aid to test certain situations I couldn't test with the selenium or proved impractical to test with selenium for sprint 2.

The fifth item is db.sqlite3 our database files as a spent quite a bit of time editing and adding data to polish the website and aid with my testing.
